

- It takes 20 man hours to make a single reel.
- Drums come in a wide seven eighths of an inch or five eighths width.
- Nickel silver is used for the centre bush bearing and drum spokes, just like the original Aerial.
- To enhance the black anodising, polished brass is used for the reel seat and starback.
- Each reel is individually numbered and comes in a presentation box.
- Prices range from £175 up to £205 and delivery takes eight weeks from ordering.

9. When the black anodised plates return to the workshop, the assembly of the centrepin begins with the riveting of the front and back spool plates with nickel silver rivets on a hand press.

10. The centre bush bearing, the spokes, springs and other component parts are assembled with care and the backplate fitted with a ratchet mechanism.

11. When assembly is complete the centrepin is precision balanced to perfection then polished ready for delivery.
